SUMMARY

Undergraduate in Computer Science (AI & ML, 2027) with hands-on experience across the full ML lifecycle – data pipelines, ensemble and deep learning models, explainability, and production deployment – built through internships at Nirvaha Wellness LLP, Cothon Solutions, and Edunet Foundation, and a portfolio of 8+ end-to-end AI systems including NSE Intelligence, PREAK, and a Fraud Detection Intelligence System. Seeking a Machine Learning role to build scalable, production-ready AI systems.

EDUCATION

Vignan Institute of Technology and Science — CGPA: 8.77 Hyderabad, India
B.Tech, Computer Science – Artificial Intelligence & Machine Learning 2023 – 2027
Intermediate (MPC), Telangana State Board — Percentage: 93.60 2021 – 2023
SSC — CGPA: 10.00

WORK EXPERIENCE

Full-Stack Developer Intern Nov 2025 – Present
Nirvaha Wellness LLP Hyderabad, India

- Architected and unified two separate codebases (landing site and dashboard) into a single React (TypeScript) application, integrating Node.js, Express, and MongoDB backend services.

Machine Learning Intern Mar 2025 – May 2025
Cothon Solutions Remote

- Engineered end-to-end ML pipelines for Airfare Price Prediction (**96.79%** R-squared) and CNN-based Deepfake Detection (**84.67%** accuracy) using Scikit-learn and Pandas, applying feature engineering and cross-validation to improve generalization on real-world datasets.

AI/ML Intern Jan 2025 – Feb 2025
Edunet Foundation (SAP, Microsoft & AICTE) Remote

- Designed a disease outbreak prediction model using Python and Scikit-learn, improving accuracy by **18%** through EDA, feature engineering, and statistical preprocessing on **5,000+** records.

PROJECTS

NSE Intelligence | *Python, Flask, Ensemble ML (RF, XGBoost, Logistic Regression), Kotlin/Android*

- Built a multi-phase stock analysis platform for NSE/BSE equities: trained an ensemble ML model (400-stock universe, technical indicators), scaled to a 1500-stock screener, with a Flask API, live dashboard, Telegram/Email alerts, and a companion Kotlin Android app.

PREAK – Preetham's Engineering AI Kernel (Ongoing) | *Electron, React, TypeScript, Python, FastAPI*

- Architecting an autonomous AI engineering platform that plans and executes multi-step coding tasks, benchmarking its workflow against 3 open-source tools (Continue, Cline, Aider).

Fraud Detection Intelligence System | *FastAPI, XGBoost, SHAP, Redis, JWT, Streamlit*

- Developed a production-style fraud detection pipeline using XGBoost with SHAP-based explainability, JWT-secured FastAPI endpoints, and Redis caching, surfaced through a 16-panel Streamlit dashboard for real-time monitoring.

ResearchPilot AI | *RAG, LLaMA-3.3-70B, ChromaDB, Groq API, Semantic Search*

- Built an end-to-end RAG pipeline using ChromaDB and LLaMA-3.3-70B (Groq) with semantic chunking and vector similarity search for document-grounded question answering.

Multimodal Eye Anemia Detection | *CNN, XGBoost, SHAP, Deep Learning*

- Developed a fusion model combining ocular image features (CNN) and structured blood report data (XGBoost) for anemia classification, achieving **98.10%** accuracy with SHAP-based explainability.

TECHNICAL SKILLS

Languages/Frameworks: Python, Java, C/C++, JavaScript, TypeScript, Kotlin, React, Node.js, Express, Flask, FastAPI, Electron

ML/AI: Scikit-learn, Pandas, NumPy, XGBoost, CNN, RAG, LLMs, Feature Engineering, EDA, SHAP, Multi-Agent Systems

Data/Tools: MongoDB, MySQL, Redis, REST APIs, Git, GitHub, Docker, Railway

Soft Skills: Communication, Leadership, Team Collaboration, Problem Solving, Critical Thinking

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL Certifications: Introduction to C, DSA in Java, Computing with Python, Introduction to Machine Learning | HackerRank: Python (Gold), C/C++/Java (Silver)
- Spearheaded a technical team and administered data for 600+ participants at a national-level college hackathon, coordinating development tasks and ensuring timely delivery.
- Delivered 8+ projects spanning AI, Machine Learning, and Full-Stack Web Development.
