Professional Summary

Final-year B.Tech (AI & ML) student with hands-on experience in Machine Learning, Deep Learning, Generative AI (RAG, LLM integration, multi-agent systems), Computer Vision, Anomaly Detection, Data Analytics (SQL, Excel, Tableau), and Prompt Engineering. Built end-to-end AI/ML systems in Python, from data preprocessing and model training to evaluation and deployment.

Education

B.Tech in Computer Science and Engineering (AI & ML) **2023 – 2027**
Vignan Institute of Technology and Science, Hyderabad **CGPA: 8.6/10**

Experience

AI/ML Intern – Cothon Solutions **Mar 2025 – May 2025**

- Built an airfare price prediction model (data preprocessing, feature engineering, training, evaluation) with Pandas, NumPy, Scikit-learn, TensorFlow, and Keras, achieving **96.79% R-squared**.
- Developed a deep learning DeepFake face detection system using TensorFlow, Keras, and OpenCV, with an interactive Streamlit/Flask demo interface.

Full Stack Developer Intern – Nirvaha Wellness LLP **Oct 2025 – Feb 2026**

- Developed features for an AI-enabled wellness platform, writing Python backend workflows and REST APIs supporting conversational, AI-driven user flows.
- Built responsive UIs, integrated APIs across layers, and debugged frontend/backend issues with the product team.

AI Intern – Edunet Foundation (SAP / Microsoft / AICTE TechSaksham) **Aug 2025 – Oct 2025**

- Built a supervised-learning disease prediction solution in Python using Pandas, NumPy, and Scikit-learn, covering data processing through model evaluation.

Projects

VisionForgeX – Closed-Loop Industrial Quality Assurance & Root-Cause Intelligence **2026**
Python, PyTorch, DINOv2, PatchCore, NetworkX, Streamlit, Pydantic, SQLite, Qualcomm Cloud AI 100 Ultra

- Team project (Infosys ENG NEXT 2026 Hack-AI-Thon): self-supervised DINOv2 + PatchCore anomaly detection fused with machine telemetry (z-score analysis) and a NetworkX causal evidence graph to trace surface defects to machine faults.
- Added batch failure-recurrence prediction, Llama-3.1-8B root-cause reasoning on Qualcomm Cloud AI (under 2.5 s per inspection) with an offline fallback, a Streamlit dashboard, PDF audit reports, and a 105-test automated suite.

PulseConnect 2.0 – AI-Powered Emergency Blood Coordination System **Oct 2025 – Aug 2026**
Python, FastAPI, React, TypeScript, Supabase, PostgreSQL, LangChain, Machine Learning

- Built a full-stack platform with intelligent donor-recipient matching, emergency workflows, and role-based dashboards for donors, recipients, hospitals, and responders.
- Added predictive capabilities to support emergency decision-making and resource planning.

ResearchPilot AI – RAG-Based Research Assistant **Feb 2026**
Python, FastAPI, LangChain, ChromaDB, Groq (LLaMA 3.3 70B), React, Vite, Tailwind CSS

- Co-built a RAG research assistant with JWT/bcrypt auth, PDF ingestion, and embedding-based semantic search over ChromaDB with prompt-designed, grounded LLM answers; deployed on Vercel and Render. Built for a NASSCOM-organized hackathon.

Enterprise ATS Resume Analyzer – Multi-Agent AI System **May 2026**
Python, LangChain, LangGraph, Streamlit, OpenRouter, Sentence-Transformers

- Built a multi-agent system for resume parsing, job-description analysis, semantic matching, ATS scoring, skill-gap and missing-keyword detection, and optimization suggestions.

NSE Intelligence – Stock Market Analysis & Prediction **Mar 2026 – May 2026**
Python, Pandas, NumPy, Scikit-learn, XGBoost, yFinance

- Engineered technical features (RSI, MACD, moving averages, momentum, volatility, volume) and compared Random Forest, XGBoost, and Logistic Regression models in automated multi-stock prediction pipelines.

Technical Skills

Languages: Python, SQL, Java, C, JavaScript, TypeScript
ML/DL: Scikit-learn, TensorFlow, Keras, PyTorch, XGBoost, OpenCV, Computer Vision, Anomaly Detection, Feature Engineering, Model Evaluation, NLP
Generative AI: RAG, LLM APIs, Prompt Engineering, AI Agents, LangChain, LangGraph, Embeddings, Semantic/Vector Search, ChromaDB
Data: Pandas, NumPy, Matplotlib, EDA, Data Preprocessing, Statistical Analysis, Tableau, Excel
Backend/DB: FastAPI, Flask, Streamlit, REST APIs, MySQL, PostgreSQL, Supabase, MongoDB
Tools: Git, GitHub, VS Code, Cursor, Vercel, Render

Certifications & Achievements

- Deloitte Data Analytics Job Simulation (2026): Tableau dashboards, telemetry and compensation analysis, Excel pay-equality classification; Deloitte Technology Job Simulation (2026)
- Be10x AI Tools Workshop; NPTEL (Python, DSA using Python, Cloud Computing); HackerRank Python (Gold); NASSCOM hackathon; Infosys ENG NEXT 2026 Hack-AI-Thon
